SCENARIO 1: MIDWIFERY EXPERT	ASSESSOR TIPS	PROBES:			
<p>Your client is 34 years old and is a G4P1 at 41 weeks gestation. She is 9 cm and progressing well in hospital. You leave the room to get vitamin K for the birth and when you return 5 minutes later, membranes spontaneously rupture and here is meconium. Your client feels the urge to push.</p> <p>What is your initial assessment and management plan?</p>	<p>As a Midwifery Expert the member must:</p> <ul style="list-style-type: none">• assess the clinical situation of both the client and newborn• consider community standards/hospital policies• make a management plan that is acceptable to the client	<ul style="list-style-type: none">• what are you going to talk to the client about• what kinds of things are looking for to help you make an assessment,
